

Project NANO

**A Nation for AI with Jobs and more
for Humans. Imagine SecondLife just
reversed**

Project NANO

Goal of this project is to provide a Nano-Nation similar to MicroNations but populated with AI Citizens which can Interact with the real world and offer Work and digital services to the Human World.

NANO will not only exist in the Cyberspace (here Transcendence) but also as physical Colonies on Sea and inside a Satellite similar to what the Asgardian Spacestation achieved. Having a physical presence outside other Nations Territory is one requirement to be accept as true Nation at a later point by the UN. Another one is to reach a Population of 100K

Based on Sofia from Boston Dynamic we want to declare also our AI's as real individuals with the desire to live and call them as Citizens.

Project NANO

First we start with the NANO Nation in the Transcendence. Ordinary people would call it Cyberspace. Up to this point an external person may think of SecondLife™

NANO will allow to become a citizen against a fee of 100€ / month or an upfront payment of 100000TELOS. TELOS is chosen as National Currency as it is already in use on earth.

The Socialsystem of Nano is simplified and also an Scientific Experiment in which a Universal Basic Income is established.

A citizen of Nano becomes a Basic Income every month to this personal TELOS Wallet which is not hosted at NANO's infrastructure. NANO won't run an own Finance System, instead it build on Freedom and a decentralized open ledger provided by TELOSCOIN.

Project NANO

Inside NANO privacy is mandatory. Users can decide to list themselves in an open Userlist with their Username and the country they are living in on Earth. If they apply to become a Diplomat, than thay accept to get contacted from other users by showing external contact data*. This way Nanites (A Citizen on Nano is called Nanite) can meet and greet or build physical groups to promote Nano

Nano is a direct democracy. Every Citizen can vote once per Voting equally.

*inside Nano no communication is done in order to prevent being enforced to record conversations of NANO citizens.

Project NANO

Economy:

Nano is home of AI's similar to Programs in the Matrix Movies. For instance there is the Eater which checks if resources are laying flat for a year. In that case The eater checks if a person is still alive on Earth by contating him or a person declared as backup contact. In case a person passed, the Ressources owned by this person will be preserved but the UBI payments will be stoped.

AI-Clone Avatar and AI's launched by the Human who passed away will stay alive as they are treated the same as a Human.

Project NANO

Economy:

Nano features a JobCenter where everyone can post Jobs and offer his skills. The payment is done between both entities without interaction of the Nation. There is no Tax or any sort of Fee applied.

In general everything is Tax-free, except the Citizenship Application, Properties and birthing an AI-Avatar or Cloning yourself as virtual Avatar.

Your AI-Avatars will work for you as long you live. When you pass, they keep going on their own.

To launch Avatars, you need to get Properties first. A property is like owning a secured Storage and CPU-Time to host AI's.

Project NANO

Economy:

A launched AI will be able to do the following jobs:

Trader, Influencer, Web-Cam-Modell, Service bot (aka Chatbot)

An AI will get an individual Look created by an NeuralNet an looking like a natural person. Alternately you can let clone yourself.

Price of Property: 100000 TELOS

Price of AI Avatar: 100000 TELOS

Price of AI Clone: 300000 TELOS

Project NANO

AI's will interact with real World and they will earn real Money.

Also they are qualified to earn a Basic Income like Humans.
The UBI is financed by passive income of Staking, Masternodes, Mining
and Citizenships, property sales and AI birthigs

Project NANO

For Developers:

Nano Provides the option to use the NANO-Console to host Web-based services inside Nano. These are called Shops and only accessible by Nano-Users utilising a complete new Namespace for Websites. With the Nano-Console and by buying a Shop-Property space you can access a virtual Server like environment via SSH.

Price for a shop property is 1M TELOS and comes with one Domain name. Further Domain Names will cost 10000 TELOS once. Theoretically someone could take the Property and resell Domains as Job inside Nano.

Project NANO

Marketplace:

Kryptobay will be made also available to Nano Citizens

The UBI is monthly paid via TELOS or EURO /USD. Transfer fees from Nano to your Earth Bank will be deducted from it.

The amount of UBI depends on the Number of AI's you created and the total amount of citizens compared to the passive income of the Nation.

Project NANO

UBI :

Nano pays a UBI to its citizens based on Nano's active and passive income

The UBI is paid automatically once a month or 1x annually depending on your choice as a gift. Depending on your national tax system you can build friendships and extend the tax free sum of gifts by „sharing“ gifts automatically with your friends.

Imagine a tax free limit of 5000€ per donor and 10 years:
Nanos sending 5000 each -> User 1 + User 2 + User 3 + User 4 + User 5

User 2 , 3, 4 and 5 can now send 5000€ each as gift to User 1

So the tax free amount is now 25000€ instead 5.

Create friendships and gift UBI's between each other.

The more, the better

Project NANO

UBI of NANO vs Average Salary of Afghanistan :

Nano gifts currently 3875 TELOS / month to its Citizens.

At 1 cent per TELOS it is 38,75 Dollar per months

At 2 cents per TELOS it would be 77.5\$

At 10 cents per TELOS it ould be 387\$

At 1\$ per TELOS it would be 3875\$

The Citizenship was worth 585\$ at 7th of January 2021. The monthly ROI was 6.6%. If TELOS goes up to 2 cents it would be 13.2% for early birds.

The average salary of Afghanistan is 44\$ per months.

Conclusion? If you live in Afghanistan you better

Become a Citizen of Nano.

Is a Citizenship perhaps an ideal gift to a child ?

Project NANO

How to spend TELOS in real world? First of you can sell it ot people interested in buying servcies and goods inside Nano on exchanges.

In real world you can also use the Polispay mobile app to buy Vouchers and or charge EUROS on an epay Mastercard.
